[2] The information is provided in accordance with the Passenger Car Energy Labelling Regulation. The specified values were determined according to the prescribed measurement method WLTP (Worldwide Harmonised Light-Duty Vehicles Test Procedure). The fuel consumption and CO2 emissions of a passenger car depend not only on the efficient utilization of the fuel by the passenger car, but also on the driving style and other non-technical factors. CO2 is the main greenhouse gas responsible for global warming. A guide on the fuel consumption and CO2 emissions of all new passenger car models offered in Germany is free of charge at any place of sale in Germany where new passenger cars are on display or offered. The guide is also available here: www.dat.de/co2/
